

DIMENSION-POLYANT

The Sailcloth Producer

Code Zero white

The Code Zero White line is designed to take advantage of developing sail handling systems, allowing cruisers to achieve cruising performance on a par with their racing counterparts. CZ White incorporates our proprietary non-reflective film to achieve a slicker, more flexible surface to facilitate roller furling and sail handling. The softer hand simplifies handling on the foredeck and minimizes friction in hoists and takedowns. The film is plied to a rugged polyester woven taffeta which deals with abrasion and provides more diagonal stability to the overall structure. The film/taffeta ply encases large Polyester yarns that accept the directional loading and minimize stretch. The prudent use of Polyester load yarns ensures a long lasting, economical product that fits into the cruising budget.

Code Zero white

● MATTE FILM

DIMENSION-POLYANT's proprietary non-reflective matte films feature a slicker hand, critical for sail handling in both furling and non-furling Code Zero's. With the added benefit of minimal glare, the matte film represents another step forward in Code Zero handling and use.

● TAFFETAS

In house treatments of our standard taffetas help increase tear strength over the life of the sail. A white dye in the adhesive layer combined with white polyester fibers and white taffeta delivers a bright white fabric appearance matching many cruising inventories.

● MULTIPLE WEIGHTS

Differing yarn counts from the lightest to heaviest weight styles allow CZ White to cover a wide range of applications, creating strong, stable sails in either step down or single weight constructions. CZ White covers the range from boats 20 - 50' in length.

- ▶ *improved elongation resistance*
- ▶ *excellent diagonal stabilization*
- ▶ *highly resistant surfaces*
- ▶ *UV stabilisation*
- ▶ *mildew protection*
